CLASSROOM IMPACT

Students have continued to progress through the water quality, nutrients, Computer-Aided Design (CAD) units.

Students at For My Kidz and The Food Project ate mangoes, which was a new experience for many.

UPCOMING PLANS

The Seedling team built hydroponics units for NorthBay Academy.

Future plans also include bringing different kinds of fruits into the classroom — students requested dragonfruit for their next taste test.

GETTING CREATIVE

Students at The Food Project used a website called Tinkercad, an online 3D modeling program. Students made designs ranging from their own name, abstract shapes, and more.
