

# SEEDLING VOL 7 | NOV 2023

## Culture in the Classroom

Call us non-traditional, but we're reshaping classrooms with a blend of culture and innovation.

In our programs, we strive to create spaces where students are able to freely express themselves and remain rooted in the places they call home while bringing a fresh perspective to STEM education.

As we bid farewell to a bright semester and the Halloween festivities, our team is delighted to share insights on the positive influence of infusing culture into our classrooms.

Breaking tradition, this approach has not only enhanced the teacher-student dynamic but also sparked enthusiasm for STEM subjects aligned with personal interests. We are excited to see how this continues to transform not only the learning spaces we work in but also the experiences of the students themselves!
