### CLASSROOM IMPACT

A recent student survey conducted at the Green Street Academy, where our teachers visit weekly, revealed that **92.5%** of students learned something new from the Seedling curriculum.

### HYDROPONICS EXPERTS

Students from For My Kidz built 4 hydroponics units, each with different concentrations and nutrients. Students also engaged with the materials in the past few weeks, which covered the basics of nutrition & biochemistry.

### UPCOMING PLANS

The Seedling curriculum will next cover water quality, and our team will continue to feature interactive games and videos.

Students at For My Kidz will continue to observe their hydroponics systems to see which grow the best. They'll be able to draw conclusions about the impact of nutrients on plant growth.

### TOUCHING HEARTS

A student from For My Kidz gifted the teachers a work of art featuring a heart made of gems.
